

CORPORATE BROCHURE

The trusted bridge between Europe and the world's industrial and energy markets.

The accountable partner for specialized supply, commercialization and the qualified technical support in the field — where the scope of a specific equipment sale requires it — across the commercial, industrial, and energy sectors.

Dual supply & distribution, and technical engineering, under one roof.

KSP Projectos is an export and supply company based in Portugal, specialized in providing equipment, raw materials, and products for the oil and gas industry, and for the commercial and energy sectors, to clients across Europe, America, Africa, and Asia. In addition to industrial supply, we actively engage in the commercialization of hydrocarbons and essential energy commodities.

We complement these offerings with qualified technical support in the field — installation accompaniment, calibration, testing, and related engineering services — deployed selectively, on a case-by-case basis.

Dual

Supply & distribution **and**
technical engineering, under
one roof.

MISSION & VISION

Mission

To supply specialized equipment, raw materials, and products for the oil & gas, and energy sectors, obtained responsibly and backed by qualified technical support wherever a specific engagement requires it, so that our clients meet their operational goals on time and without compromise on safety or quality.

Vision

To be the trusted bridge between Europe and the oil & gas industry and energy markets of America, Africa, and Asia, recognized as the reference organization for companies that require the specialized supply and technical accompaniment from a single accountable partner.

Four pillars that remove client friction.

01

Supply-Led, Technically Backed

A reliable export and supply partner and, where the engagement requires it, one that can also stand behind the equipment with qualified installation and field support.

02

Geographic Reach

A European base with active export lines across America, Africa, and Asia, positioning KSP Projectos as a genuine bridge between European sourcing and these markets.

03

Sector Depth

Deep specialization in oil, gas, petrochemical, and energy sectors, with supply of equipment and material.

04

Support Where It Counts

Technical support (installation accompaniment, calibration, risk and reliability studies, engineering, and project technical assistance) is selectively applied to engagements where it reduces real execution risk for the client.

From material supply to installation accompaniment.

01

Supply & Procurement

Specialized hydrocarbon measurement systems (LACT), piping, valves, instrumentation, electrical equipment, pumping systems, containers, and chemicals for water treatment and oil & gas production.

02

Design & Engineering

Engineering at any project stage, integrated project management, environmental and risk consulting.

03

Studies & Evaluations

Environmental impact, hydrogeology, geotechnics, topography, constructability, financial evaluation, and risk & reliability studies.

04

Oil & Gas Services

Chemical application and control, on-site technical assistance, multiphase flow metering for well testing, and integrated control systems.

05

Environmental Commitment

Environmental responsibility is a sourcing criterion across every category.

KSP Projectos combines its human talent and industry expertise to recommend products and solutions that are efficient and compatible with environmental preservation, an operating principle, not a separate service line.

OPTIMIZED ECOSYSTEM

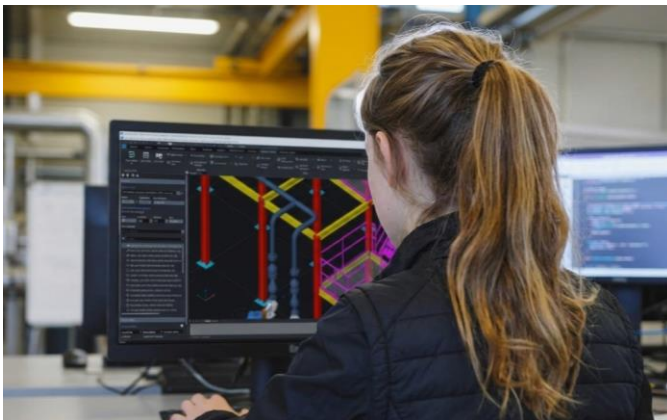

From customer needs to customer satisfaction.

TRACK RECORD

Documented and verifiable projects.

Engineering, telecommunications, instrumentation, and geotechnical studies delivered for international operators.

2023

Consorcio Paldaca, C.A.

Procurement of electrical materials and instrumentation.

2022

China Railway (HK) Trading Ltd.

Basic and detailed engineering for interconnections for the early start-up of the Vacuum Distillation Unit.

2022

China Railway (HK) Trading Ltd.

Telecommunications and instrumentation work for the Vacuum Distillation Unit interconnections.

2022

China Railway (HK) Trading Ltd.

Geotechnical and structural engineering study.

01

Physical Trading

Sourcing and commercialization of crude oil, refined products, LPG/LNG, and industrial commodities for clients across Europe, America, Africa, and Asia.

02

Offtake & Supply Agreements

Structuring offtake and supply arrangements that give producers reliable buyers and clients dependable, contracted volumes.

03

Logistics & Documentation

Coordinating shipping, storage, customs clearance, and trade documentation so cargoes move without compliance friction.

04

Risk & Compliance

Counterparty due diligence, KYC, and adherence to import/export regulation in every jurisdiction we operate in.

COMMERCIALIZATION

Hydrocarbon & commodities commercialization.

Beyond equipment supply, KSP Projectos structures the commercial side of hydrocarbon and commodity flows — connecting producers, traders, and end users across our markets under the same accountable, single-partner model.

LET'S TALK

One partner, accountable from end to end.

Tell us about your project in the commercial,
industrial, or energy sectors. We coordinate supply
and engineering under one roof.
